

Application No. 09/819,197
Amendment dated June 28, 2004

Amendments to the Specification

Please add the following new section to page 1 of the specification between the Title and the Background section:

Cross-Reference to Related Applications

This application is a continuation of Serial No. 09/819,197 filed March 28, 2001, now U.S. Patent No. 6,685,464 issued February 3, 2004.

Please replace the paragraph starting at line 8 of page 1 and ending at line 13 of page 1 with the following paragraph:

In a previous disclosure of the same assignee of the present invention, Air Liquide Serie file 5167, filed November 10, 1999, Application Serial No.09/437,526, now U.S. Patent 6,314,896 issued November 13, 2002, there was a proposed scheme of oxygen-enrichment in boilers using large amounts of oxygen, up to full oxy-fuel combustion. That patent application involved a certain ratio between the oxygen enrichment and the flue gas recirculation, such that the design boiler parameters are maintained constant.
